# 1 Introduction

In the domain of discovering, deciding where to dine out is an important topic that impacts almost everyone's lives, and most of the time it is time-consuming and frustrating. At least once per week, everyone wants to try somewhere new from lots of different options to have a shared experience with others. However the problem arises with the gap between what users want and need, and how they are supported in fulfilling these.

From research and interviews, there are 8 factors that are important to almost every user when deciding where to dine out. A user wants to be able to choose what they are craving from a nearby location with easy access to basic information. These factors are all beautifully handled by existing applications, however they focus heavily on reviews when research shows that word-of-mouth recommendations have a greater influence. Additionally, those with dietary requirements (about 20%) and those with a budget (almost everyone) must search using niche apps or be directed to a menu that they must filter themselves. What results is an average of 15 minutes searching every single time, with budget, dietary requirements and friend recommendations ignored.

This report details the process and feedback of three iterations of the interaction decision process to design an application to support all of the factors that are important to a user when deciding where to dine out.

## 2 Low Fidelity Prototype

The initial research and conceptual design of the low-fidelity prototype were presented as a mind map and [presentation](#). In review, there are six main features that have been incorporated into the design of the low-fidelity prototype to address users needs. All of these features will be brought to the attention of the user during this first evaluation to determine they align with user needs and whether they should be carried into the next iteration.

### 2.1 Choose Evaluation Method

The purpose of these evaluations is to learn more about the users' needs, confirm that the conceptual model is appropriate for the users, and to provide feedback about design and flow. It is imperative that any misalignment of values or expectations are identified at this early stage before further time is spent on interaction design. Users must be to understand how the system works and it must align with their expectations to be a worthwhile project. The evaluation method chosen for the Low Fidelity Prototype is a combination of Design Walkthrough, Co-design and TAM.

A design walkthrough involves giving the user a task and, without guidance, ask them to complete the task. By observing and documenting how they interact with the system, feedback on how users expect the system to operate and what they they expect the system can be obtained. This feedback provides clearly whether the conceptual model chosen is appropriate to the users mental model. This method was chosen as the steps involved in using the application are almost the same for every instance, and so it is imperative that users are able to intuitively

and easily complete these steps (i.e the task) at this early stage of design.

The co-design process generally involves explaining to the user how the system works and asking for their opinion how they would design the features of the application. For this evaluation, at points during the design walkthrough when a user gets stuck, in addition to asking them what the issues are and what they are experiencing, additional co-design practices will be adopted. This includes asking the user what they think should be happening and how they would design this part to be more intuitive. Since the user is in control of instructing the system it is important that they are able to achieve their goal of choosing a place to dine out the way they want to and expect, especially since it is a process that will be repeated on average twice a week for them.

TAM consists of a set of questions based on perceived usefulness, perceived ease of use, attitude and intention to use the system. These questions are scaled from 1 (strongly disagree) to 4 (strongly agree). For this evaluation, eight of the questions were selected (at least one from each category). These questions were identified as most relatable to the purpose of the application, without being repetitive. The questions provide quantitative analysis that can assist with identifying problem areas of user acceptance, however by themselves they don't provide the reasoning behind the response. So in addition to these questions, follow up questions will be asked when a response less than strongly agree is selected to gain further insight into the users experience to understand why there is a gap between mental models. This method was incorporated as an extension to the design walkthrough/co-design process to determine that not only can users intuitively use the system but that they believe the design and the features assist them with mitigating the problem of deciding where to dine out.

Together these evaluation methods provide a succinct overview of whether at this stage of design that application gives the user what they want, what gaps may exist in the conceptual model and the overall acceptance of the design and flow of the prototype.

## **2.2 Evaluation Protocol**

This protocol was created to provide structure and consistency amongst evaluation of participants. The protocol outlines the flow of the evaluation including scripts, instructions and details of notes to be taken. The protocol can be viewed as Appendix A.1

## **2.3 Undertake Evaluations**

Due to current measures relating to COVID-19 all evaluations were performed online, unless part of the family unit. Users are invited to a Google Form where they are asked to sign in with their Google Account. From here they can navigate themselves through all aspects of the evaluation. The form can be viewed in Appendix A.2.

Firstly, the user is introduced to the evaluation process and asked to complete a consent form online. The consent form is then uploaded in the provided section on the form. Secondly, the user is given instructions for the Design Walkthrough and directed, via a link, to a Google Slides presentation. Here they are given the task and access to navigate through slides depicting different pages of the paper prototype. The task is fairly vague to provide feedback on whether it is clear to the users what features are available without being told. The presentation is

designed so that when users select areas of the paper prototype that are ‘clickable’ they are directed to the appropriate slide with the corresponding page. The presentation can be viewed in Appendix A.3.

Thirdly, whilst completing the task any time they are stuck for a period of time they are asked to stop and follow up questions are asked, including contribution of design as part of the co-design process. Finally, once the user has completed the task they select a link on the presentation that takes them back to the Google Form where they will complete the TAM evaluation. On the form, users will select their answer between 1 and 4 (strongly agree) which will be stored as quantitative results and follow up questions will be asked for further clarification. The results can be viewed in Appendix A.4.

Throughout all sections of this process, notes were taken of observations and feedback. These notes can be seen in Appendix A.5.

## 2.4 Evaluation Analysis

From the process of this evaluation, there are a number of key factors that will influence the design of the medium prototype to ensure increased usability and acceptance of the application for the user.

1. Filter by preferences (including both craving and dietary requirements) - this filtering extends to the map results and menu display
  - Users liked that they had the option to filter by dietary
  - It wasn’t clear that this extended to the menu page as well
2. Interactive map - replicate the familiar experience of exploring destinations
  - Users had no problem selecting a restaurant
  - All users selected the filter icon and expected to be taken back to the preferences page. At this time it was to bring up a more detailed version of the same list (with those previously chosen pre-selected). User suggestion was to have a more detailed list to begin with and the filter selection goes back to this page each time for familiarity.
3. Promote existing deals - have existing deals from restaurants separate from the menu and easily viewable based on date selection
  - Users liked that deals was easily accessible and was one of the main tabs
  - Was clear that it was filtered based on the day
4. Editable and shareable list - provide support to be able to compare options and share these with others
  - Many of the users mentioned that before getting to the list page they didn’t know what the ‘list’ icon on main tab meant. Once they reached the page they understood straight away what it meant. One of the suggestions was a different name, such as ‘Compare’ since list was vague.
  - Most of the users noticed the share button and knew exactly what it did, one of the users suggested adding the text ‘share’ as well like every other icon
  - For all users, except one, when they reached the page it was not clear what the next step was. Their attention was on the 6 main tabs and they didn’t notice the smaller heart and list icons in the top right corner. Many of the users didn’t recognise what

the 'list' icon was. One of the suggestion was to just have the text 'Add to list' and expected it to be near the name of the restaurant.

- Users expected to be able to select the restaurant and be taken back to the restaurant information page. At this time the selection on the list page was to select that restaurant to move forward. A suggestion made by a participant during the co-design was to have 'left swipe' to remove from list, 'click' to go to the restaurant page and 'right swipe' to be given directions.
5. Recommend to a friend - focus on word-of-mouth recommendations instead of star ratings
    - Users liked the idea reviews were friends only
    - Users understood the thumbs up and down was ratings, but not that it was friends only.
    - None of the users had issues with the notification page, and understood it was related to friend recommendations (after being told earlier)
  6. Restaurant information - ensure users are able to readily access general information about a restaurant without being overwhelmed
    - Users understood all of the icons on the about page.
    - Users had no issues with finding the information about the restaurants.

# Appendices

## A Low Fidelity Prototype

## A.1 Evaluation Protocol

# EVALUATION PROTOCOL

## Low-Fidelity Prototype

Teann-louise Cunningham

Complete a design walkthrough with co-design and TAM questionnaire of a low-fidelity prototype to identify gaps between conceptual and mental models.

## PREPARATION

Since this is an individual evaluation only myself and the participant will be involved. Therefore, I will be fulfilling the role of facilitation, observation, recording and interaction flow. The following materials will be prepared for the user prior to the evaluation.

1. Electronic Consent form
2. Paper Prototype
3. Walkthrough Presentation Slides
4. Questionnaire
5. Google Forms
6. Zoom software

## INTRODUCTION

### Opening Statement

User has been sent a link with survey and instructions on Google Forms. User's screen is being shared over an online conference call.

*Thank you for taking the time today to provide some feedback on the early stages of a mobile application. The purpose of this app is to assist you with deciding where to dine out using an interactive map, filtered preferences and comparison feature.*

*Today, I will be showing you the basic prototype to observe how you interact with it , to determine any functionality or design that is not intuitive, and whether it is achieving its purpose effectively for you as the user.*

## Consent

*Before we get started, please read carefully through this consent form. It reiterates the purpose for today and how your data will be used. Your personal details will not be used directly in any way and all observations are of your interaction with the software only. If you like to proceed with contributing please fill out this form and upload with the given link.*

User reads through and fills out consent electronically with provided link and uploads.

*Thanks for filling that out, please save it on your computer for the time being. If at any time you don't wish to continue just let me know and we will stop, and none of your feedback will be used.*

## DESIGN WALKTHROUGH

### Instructions

*To get your feedback, I will be asking you to complete a specific task using the prototype. At any point you get stuck or are confused I may pause you for a moment to ask you some questions. I won't be explaining or showing you how to use the system. The point of this exercise is to see what you, as a first time user, expect of the system and how you think it should flow.*

*In a moment you will be able to view the paper prototype and move through the pages. Please interact with the application as if it was reactive. This means pressing everything that you normally would to complete the task. The more realistic your interaction with the prototype the better the feedback to know where to improve.*

*You will have 10 minutes to complete the following task. Any questions?*

*Please click on the link to the presentation. The task is to choose two places and decide between them where you would like to eat dinner tonight, takeaway of course. You can start.*

The user confirmed they have no questions and is starting the task. Record, observe and take detailed notes of their process.

### Task Notes

These are the steps that the user should be going through to complete the task, and observations relating to each one that need to be taken note of.

1. Filter preferences: This is the default page and so all users will start here.
  - Do they know how to filter?
  - Did they fill all of the filters out before proceeding?

- Did they know how to get to the next page?
  - How long did it take to complete this page?
2. Interactive Map: This is the page that follows the preferences page.
    - Were they able to select a restaurant?
    - Did they know the map was interactive?
    - Did they try to press any other buttons on the page?
    - How long did it take them to select a restaurant?
  3. Restaurant Information
    - After selecting a 'dot' on the interactive map they will be brought here.
    - How many of the cards did they select?
    - Did they understand the menu was filtered?
    - Did they know what all the icons meant?
    - Were they able to add a place to a list?
    - What information did they want to look at?
    - How long did it take them to move to another step?
  4. List page: If a user selects the 'List' icon they will be brought here to compare.
    - Did they get to this page?
    - Do they know how to select a decision?
    - Do they understand what to do next?
    - How long did it take the user to find out their was a list page?
  5. Repeat: Since the task is to select 2 places, users will need to repeat 2-5
    - Were they able to find out how to get back to previous steps?
    - Did they want to choose a second place?
    - How long did it take to figure out how to get back to the map?
  6. Recommendation Page: After they have chosen a place and completed the task they will be nudged here.
    - Did they understand what was happening?
    - Did they know what they were suppose to do?

## CO-DESIGN

### Instructions

While completing the task the user encounters a problem and has taken more than 15 seconds to move to the next step, or they took an action expecting different functionality.

*Please just pause for a moment:*

- *Do you understand what the next step is?*
- *What are you having trouble finding or understanding?*
- *Where/what do you think you should be able to find?*
- *How would you design this part?*

Show them the next step to continue the evaluation of the whole task.

## Problem Notes

For each roadblock, in addition to noting the responses to the above questions:

### 1. The issue

- Do they understand what the next step is?
- What didn't they understand or couldn't find?
- Did they get stuck because they didn't understand the task?
- Did they get stuck because of the design?
- Was the flow confusing?
- After being showed the next step were they still confused?

### 2. Design Suggestions

- What do they think they should be able to find?
- What were their suggestions to redesign?
- How was the experience prior to this point?
- What elements of the existing design did they like?

## TAM EVALUATION

### Instructions

The user has completed the task.

*Thank you for completing the task. Now select to go back to the form. Finally, I have some questions to rate your experience and your acceptance of this application. The purpose is to determine the perceived usefulness and ease of use, your attitude towards the app and intention to use.*

*For each question choose a number between 1 and 4, with 1 being strongly disagree and 4 being strongly agree. Please answer honestly. I may follow up with additional questions where necessary.*

### Questionnaire

1. I can accomplish deciding where to dine out more quickly using this application (PU1)
2. This application enables me to make better decisions about where to dine out. (PU5)
3. Overall I find this application useful (PU6)
4. It is easy to use this application to decide where to dine out (PEOU2)
5. Overall I believe this application is easy to use (PEOU3)
6. Overall my attitude towards this application I favourable (ATT3)
7. I will use this application on a regular basis in the future (ITO1)
8. I will strongly recommend others to use this application (ITO3)

## Questionnaire notes

The quantitative answers from the users will be saved on Google Forms which automatically calculates and graphs collected data. Additionally, any score that is not 4 (strongly agree) will be followed up with the following questions.

- Why did you give this score?
- What stopped you from scoring higher?

## Conclusion

*All done. Thank you so much for your time today. Just a reminder that if you would like to withdraw at any time, let me know and your data will not be used. Thank you for your time, it is greatly appreciated and your data is very valuable.*

## A.2 Google Forms

### Dining Out - Low Fidelity

Thank you for taking the time today to provide some feedback on the early stages of a mobile application. The purpose of this app is to assist you with deciding where to dine out using an interactive map, filtered preferences and comparison feature.

Today, I will be showing you the basic prototype to observe how you interact with it, to determine any functionality or design that is not intuitive, and whether it is achieving its purpose effectively for you as the user.

**\*Required**

#### Consent

Before we get started, please read carefully through this consent form. It reiterates the purpose for today and how your data will be used. Your personal details will not be used directly in any way and all observations are of your interaction with the software only. If you like to proceed with contributing please fill out this form and then we will get started.

## A.4 Questionnaire Results

## A.5 Interview Notes

		Participant 1	Participant 2	Participant 3	Participant 4	Participant 5	Participant 6
				<b>WALKTHROUGH</b>			
<b>1. Filter preferences</b>	Do they know how to filter?	Yes - no problems	No problems here	Yes - labels were click			
	Did they fill all of the filters out before proceeding?	All except date and time	They selected postcode and dietary before go	Selected all of them			
	Did they know how to get to the next page?	Yes no problems	No problems - 'go' was clear	No problems - liked the big go			
	How long did it take to complete this page?	About 5 seconds	About 5 seconds	5 seconds			
<b>2. Interactive Map</b>	Were they able to select a restaurant?	Yes - no problems	Yes - no problems	Yes - clear they could select			
	Did they know the map was interactive?	Yes - no problems	Yes - no problems	Yes			
	Did they try to press any other buttons on the page?	Selected filters - expected to go back to preferences page	Filters to go back to the preferences page	No			
	How long did it take them to select a restaurant?	5 seconds	5 seconds	3 seconds			
<b>3. Restaurant Information</b>	How many of the cards did they select?	Looked at menu and deals	Looked at all of the 3 tabs	Looked at all 3 of the cards			
	Did they know the menu was filtered?	No - had to explain	No - had to explain	No had to tell them			
	Were they able to add a place to a list?	Yes	No the heart & list icons were too small, main focus was on the 6 large tabs,	No had to explain where the icon was, still didn't know what the 'list' really meant			
	Did they know what all the icons meant?	Yes	Didn't know what the list icon or list tab - vague name	Understood the heart but not familiar with the bookmark icon			
	What did they look at the most?	The deals	Mainly the menu and deals	Look at all of the information			
	How long to move to another step?	about 8 seconds	They got stuck at this point	They stuck stuck at this point			
	Did they understand what the recommendations meant?	Thought it was just ratings, had to explain its friends only	Thought it was a rating system, had to explain they were friends only - liked the idea	Yes they liked it was simple (thumbs up and down but had to explain it was friends only)			
	Did they get to this page?	Yes	Weren't able to get here	Weren't able to get here			
<b>4. List Page</b>	Do they know how to select a decision?	No - expected selecting to go back to the restaurant page	Yes	Yes - understood if it was highlighted then it was selected as their decision			
	Do they understand what to do next?	Yes	Yes - select go here was easy to understand	Yes			
	How long did it take to get here?	About 10 seconds	Couldn't get here	Couldn't get here			
	Did they understand the purpose of this page?	Yes - and that could share	At first didn't know what the tab 'list' was until they got there	Yes			
<b>5. Repeat</b>	Were they able to start again?	Select explore to go back	No problem - select explore	Selected explore			
	Did they choose a second place?	Yes	Was happy to choose the first one	Yes			
	How long to go back to map?	2 seconds	2 seconds	2 seconds			
<b>6. Push</b>	Did they know what they were supposed to do?	No problems	No problems - understood this connected with the friend recommendation	No problems - liked that it was simple yes or no			
<b>CO-DESIGN</b>							
<b>1. Stop One</b>		Got to the list page - wanted to go back to the restaurant information	Got to the restaurant page - didn't know what to do next or how to move forward with selection	Got to the restaurant page - didn't know what to do next			
<b>The Issue</b>	Do they understand what the next step is?	Yes - but want to be able to go back a step before making a choice	No they don't know how to interact with the restaurant except the menu, deals and about tabs	No - not sure what to do			
	What didn't they understand or couldn't find?	Different expectation for selecting the restaurant name	Don't know what to do next, the next step wasn't intuitive	Didn't know they could add to a list			
	Did they get stuck because they didn't understand the task?	No	Yes - they didn't know that they could add items to a list to compare with others	Yes - they didn't know that they could add items to a list to compare with others			
	Did they get stuck because of the design?	Yes - design wasn't as expected	Yes - they didn't know what list meant, couldn't see the list icon and didn't know what it did	Yes - couldn't find the list icon or know that there was another step			
	Was the flow confusing?	No	No - even after getting stuck, if it had been clearer on how to get to the list they said they wouldn't change the order	Up to this point was clear but was confused what they should be able to do			
	After being showed the next step were they still confused?	No	No - After explaining how to get to the list page, it made sense from there and they could continue with no issues	No it was clear after explaining what was supposed to be done			
<b>Design Suggestions</b>	What do they think they should be able to find?	Wanted selection to take them back to previous and have a different way to choose this option to move forward with	Something to let them 'go here' or move on	Didn't know what they should be looking for			
	What were their suggestions to redesign?	Swipe left to delete, swipe right to get directions and selection to go to restaurant page (remove 'go here' and 'delete' OR have tick box next to the options to mark which one should be deleted or go here)	add to list' as text button near the name of the restaurant for more attention, change the name of list to 'compare'	change the icon for list both here and on the main tab as the 'bookmark' isn't clear, add text to the icon as well			
	What was their experience prior to this point?	No problems - overall reached here in about 10 seconds	Had no problems, had all been very smooth	No problems up to this point			
	What elements of the existing design did they like?	Like the bottom 3 tabs and the 3 tabs on the restaurant page, was very intuitive up till this point	liked the overall layout of the page and especially the 3 main tabs on this page, and the 3 bottom tabs	liked the tabs and was intuitive they could be selected, very clean and simple, liked when there was text included with the icons			
<b>TAM EVALUATION</b>							
<b>PU</b>	I can accomplish deciding where to dine out more quickly using this application (1)	4	3 - Would strongly agree if clearer how to compare	4			
	This application enables me to make better decisions about where to dine out. (5)	4	4	4			
	Overall I find this application useful (6)	4	4	4			
<b>PEOU</b>	It is easy to use this application to decide where to dine out. (2)	4	3 - Having the menu and deals at the forefront was great	3 - liked the simple design, but the icons could sometimes be confusing			
	Overall I believe this application is easy to use. (3)	4	3 - Vague of journey to endpoint	3 - up till understanding that places could be compared with a list			
<b>ATT</b>	Overall my attitude towards this application I favourable (3)	4	3 - Like the app, but didn't like getting stuck	3 - smooth process but wants more clarity from restaurant to list page			
<b>ITO</b>	I will use this application on a regular basis in the future (1)	4	3 - Due to COVID won't be able to use it much now, plus normally only eats out about once a week	4			
	I will strongly recommend others to use this application (3)	4	3 - Agree because having more people you know using the apps the better the ratings	4
