

# EVALUATION PROTOCOL

## Low Fidelity Prototype

Teann-louise Cunningham (42637460)

Complete a design walkthrough with co-design and TAM questionnaire of a low-fidelity prototype to identify gaps between conceptual and mental models.

## PREPARATION

Since this is an individual evaluation only myself and the participant will be involved. Therefore, I will be fulfilling the role of facilitation, observation, recording and interaction flow. The following materials will be prepared for the user prior to the evaluation.

1. Electronic Consent form
2. Paper Prototype
3. Walkthrough Presentation Slides
4. Questionnaire
5. Google Forms
6. Zoom software

## INTRODUCTION

### Opening Statement

User has been sent a link with survey and instructions on Google Forms. User's screen is being shared over an online conference call.

*Thank you for taking the time today to provide some feedback on the early stages of a mobile application. The purpose of this app is to assist you with deciding where to dine out using an interactive map, filtered preferences and comparison feature.*

*Today, I will be showing you the basic prototype to observe how you interact with it , to determine any functionality or design that is not intuitive, and whether it is achieving its purpose effectively for you as the user.*

## Consent

*Before we get started, please read carefully through this consent form. It reiterates the purpose for today and how your data will be used. Your personal details will not be used directly in any way and all observations are of your interaction with the software only. If you like to proceed with contributing please fill out this form and upload with the given link.*

User reads through and fills out consent electronically with provided link and uploads.

*Thanks for filling that out, please save it on your computer for the time being. If at any time you don't wish to continue just let me know and we will stop, and none of your feedback will be used.*

## DESIGN WALKTHROUGH

### Instructions

*To get your feedback, I will be asking you to complete a specific task using the prototype. At any point you get stuck or are confused I may pause you for a moment to ask you some questions. I won't be explaining or showing you how to use the system. The point of this exercise is to see what you, as a first time user, expect of the system and how you think it should flow.*

*In a moment you will be able to view the paper prototype and move through the pages. Please interact with the application as if it was reactive. This means pressing everything that you normally would to complete the task. The more realistic your interaction with the prototype the better the feedback to know where to improve.*

*You will have 10 minutes to complete the following task. Any questions?*

*Please click on the link to the presentation. The task is to choose two places and decide between them where you would like to eat dinner tonight, takeaway of course. You can start.*

The user confirmed they have no questions and is starting the task. Record, observe and take detailed notes of their process.

### Task Notes

These are the steps that the user should be going through to complete the task, and observations relating to each one that need to be taken note of.

1. Filter preferences: This is the default page and so all users will start here.
  - Do they know how to filter?
  - Did they fill all of the filters out before proceeding?
  - Did they know how to get to the next page?
  - How long did it take to complete this page?
2. Interactive Map: This is the page that follows the preferences page.

- Were they able to select a restaurant?
  - Did they know the map was interactive?
  - Did they try to press any other buttons on the page?
  - How long did it take them to select a restaurant?
3. Restaurant Information
- After selecting a ‘dot’ on the interactive map they will be brought here.
  - How many of the cards did they select?
  - Did they understand the menu was filtered?
  - Did they know what all the icons meant?
  - Were they able to add a place to a list?
  - What information did they want to look at?
  - How long did it take them to move to another step?
4. List page: If a user selects the ‘List’ icon they will be brought here to compare.
- Did they get to this page?
  - Do they know how to select a decision?
  - Do they understand what to do next?
  - How long did it take the user to find out their was a list page?
5. Repeat: Since the task is to select 2 places, users will need to repeat 2-5
- Were they able to find out how to get back to previous steps?
  - Did they want to choose a second place?
  - How long did it take to figure out how to get back to the map?
6. Recommendation Page: After they have chosen a place and completed the task they will be nudged here.
- Did they understand what was happening?
  - Did they know what they were suppose to do?

## CO-DESIGN

### Instructions

While completing the task the user encounters a problem and has taken more than 15 seconds to move to the next step, or they took an action expecting different functionality.

*Please just pause for a moment:*

- *Do you understand what the next step is?*
- *What are you having trouble finding or understanding?*
- *Where/what do you think you should be able to find?*
- *How would you design this part?*

Show them the next step to continue the evaluation of the whole task.

## Problem Notes

For each roadblock, in addition to noting the responses to the above questions:

1. The issue
  - Do they understand what the next step is?
  - What didn't they understand or couldn't find?
  - Did they get stuck because they didn't understand the task?
  - Did they get stuck because of the design?
  - Was the flow confusing?
  - After being showed the next step were they still confused?
2. Design Suggestions
  - What do they think they should be able to find?
  - What were their suggestions to redesign?
  - How was the experience prior to this point?
  - What elements of the existing design did they like?

## TAM EVALUATION

### Instructions

The user has completed the task.

*Thank you for completing the task. Now select to go back to the form. Finally, I have some questions to rate your experience and your acceptance of this application. The purpose is to determine the perceived usefulness and ease of use, your attitude towards the app and intention to use.*

*For each question choose a number between 1 and 4, with 1 being strongly disagree and 4 being strongly agree. Please answer honestly. I may follow up with additional questions where necessary.*

### Questionnaire

1. I can accomplish deciding where to dine out more quickly using this application (PU1)
2. This application enables me to make better decisions about where to dine out. (PU5)
3. Overall I find this application useful (PU6)
4. It is easy to use this application to decide where to dine out (PEOU2)
5. Overall I believe this application is easy to use (PEOU3)
6. Overall my attitude towards this application I favourable (ATT3)
7. I will use this application on a regular basis in the future (ITO1)
8. I will strongly recommend others to use this application (ITO3)

## Questionnaire notes

The quantitative answers from the users will be saved on Google Forms which automatically calculates and graphs collected data. Additionally, any score that is not 4 (strongly agree) will be followed up with the following questions.

- Why did you give this score?
- What stopped you from scoring higher?

## Conclusion

*All done. Thank you so much for your time today. Just a reminder that if you would like to withdraw at any time, let me know and your data will not be used. Thank you for your time, it is greatly appreciated and your data is very valuable.*
